Friday Research Seminar in Africa Studies

## **'Institutional gaps'**

# **A qualitative study on attitudes and perceptions of vacuum extraction in Dar es Salaam, Tanzania**

with **Henrik Makokha-Sandell**

International Maternal and Child Health, Uppsala

**Friday 6 April 2018, 10.15-11.30**

House 3, room 2028, Engelska Parken  
Thunsbergsvägen 3H, Uppsala

Vacuum extraction (VE) is a popular technique of assisted vaginal delivery, aimed at shortening the length of the second stage of labour. In Tanzania, 9% of all maternal deaths are caused by complications of prolonged and obstructed labour. At the same time, the use of VE in developing countries is declining.

The seminar is based on a study of health care professionals' perspective on VE, aimed to assess personal, cultural and structural factors hindering or aiding the use of VE, and evaluate a possible future intervention. The study, conducted at the largest consultant hospitals in Tanzania, reflects on the "institutional gaps" affecting updates of clinical guidelines, research and teaching in the practical use of VE.
